Education institutions all over Europe already trust Aperio®

HafenCity University Hamburg, Germany

For the new HafenCity University, only modern, flexible access control made the grade. Their waterfront premises were fitted with 500 Aperio® offline cylinders connected to and controlled by an online SIEMENS security system. Seminar rooms, media centres, labs and lecture theatres are all protected. Aperio® locks are wireless, so it's cost-effective to have access control at many more doors than would be affordable with wired security, and to add more when needed. Aperio® flexibility means facility managers respond to staff and student changes in real time, and only need monitor one unified system. Daily key management hassles are a thing of the past.

Lund University Faculty of Law Lund, Sweden

After 20 years with their existing access control system, Lund University's Faculty of Law sought an upgrade. But how to update everyone's access rights without asking 50,000 people to return their university smart cards? The answer was Aperio® wireless locks, integrated seamlessly with Pacom's Unison security management platform, already installed at the faculty. Everything is still managed from one simple, streamlined admin interface. There's no changing locks and no longer any security threat from lost or copied physical keys – which saves the university money, too. The result? Security staff who spend more time on security, and less on key management and other labour-intensive administrative tasks.

Boosting security can also add convenience

Keeping control when there's high turnover of students, staff and visitors presents a security challenge. Lost keys are a problem. Wireless access control is the solution.

Multiple doors and diverse users who need tailored access

In an ideal world, estates managers could monitor and control access throughout their premises. They would know who came and went from computer rooms and classrooms. Conference rooms, teaching rooms and staff areas would be open to only the right, authorised site users: lecturers during the day, cleaning and other contractors after hours. The main entrance and even server racks would all be connected to one

system, and controllable from a single point. Lost keys would take just a minute to replace. Mechanical security can't do all this without placing a huge admin burden on facility managers. Wired locks are prohibitively expensive to distribute so widely.

This is where Aperio® wireless access technology comes in.

Scalable

Aperio® wireless locks are a flexible solution for all doors and multiple sites

Avoid unauthorised access

Secure critical assets like computers and lab equipment

Audit trails

Different user groups can have tailored or temporary access rights

Easy management

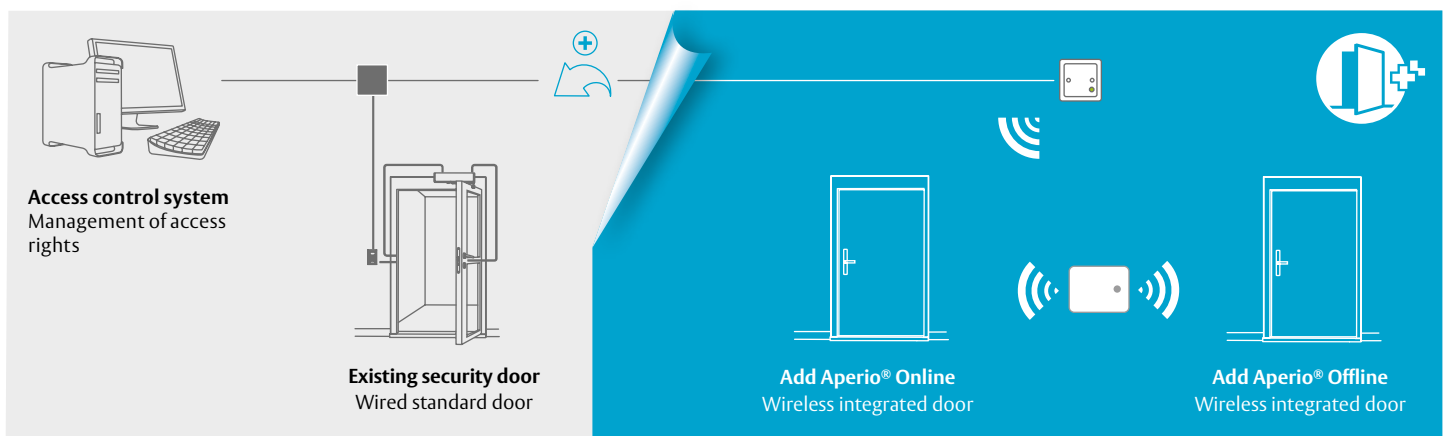

All university doors controlled from a single point – and without keys

Upgradable

Staff and students can have multi-room access from a single card

Expand your access system cost-effectively by adding Aperio® wireless locks to more doors

Secure students, valuable equipment and sensitive data

Upgrading to Aperio® wireless access control adds complete real-time management and audit capabilities – without breaking the bank

Aperio® security locks for computer rooms

Aperio® security lock with panic bar for auditoriums and classrooms

An emergency exit is needed (compliance with EN179 and EN1125)

Administration room

Aperio® delivers online and offline integration – or a mix of both at the same installation. It is easily integrated into an existing system, including access control and security systems from over 100 different manufacturers. Existing users keep the same cards and new card updates are activated instantly.

Main entrance

Wired security door – keep your existing cards, they also work with Aperio® doors

To plan your upgrade
and reap the benefits:

Go wireless

Aperio® is a wireless technology – which means no expensive or disruptive wiring on-site

Save energy

Aperio® locks are powered by standard batteries. They only wake up when prompted

Forget about keys

Aperio® solves the lost-key problem and eliminates key management costs

Save money

Aperio® locks cost less than you think

Save time

Aperio® locks can be installed in as little as 2 minutes. Maintenance only involves a battery change every couple of years

Aperio® cylinders for
conference rooms and
management offices

Aperio® escutcheons for
classrooms with optional
PINpad model
Perfect for doors requiring
multiple authentication
levels

Aperio® electronic handle
for staff and teachers' rooms

Aperio® server rack lock for
server cabinets
